PRESS RELEASE

FOR IMMEDIATE RELEASE

## ***Data Distributing Launches Multiple New Solutions for Archive, Distribution, and Patient Chart Copies, Integrated with Rimage Disc Publishing Systems***

**November 19, 2007 – Santa Cruz, CA** - Soon to be unveiled at RSNA, Data Distributing's newest bundled solutions incorporates Rimage Disc Publishing Systems for shelf archive, CD Distribution, and patient chart copy applications.

### **DICOM Shelf Archive**

Data Distributing bundles the Rimage Disc Publishing system with DICOM application software for shelf archive applications.

### **Medical Video Archive**

Additionally, Data Distributing's new Medical Video Archive (MVA) captures any motion video (ultrasound, cardiology, surgical, etc) and burns it to CD. Compared to analog tapes, CDs have an increased shelf life, require less storage space, and they are easily imported back into the network.

### **Distribution**

The DICOM CD Station includes a Rimage Disc Publishing System and a software application to manage the DICOM interface. The bundled solution produces DICOM CDs and DVDs for patient and referring physicians.

### **Patient Chart Copies**

Data Distributing's new DISCO Solution (Digital Secure Copy), integrates Rimage and HL7 application software to query, retrieve, and burn patient chart copies to CD, eliminating the bottleneck and logistical challenges of paper chart copies.

"We are introducing some exciting new solutions at RSNA which feature the Rimage Disc Publishing Systems as their cornerstone," says Nancy Fisher, President and CEO of Data Distributing. "The release of Rimage's new embedded PC systems opens up a whole new arena of applications, and building around them, is easier than ever!"

"Rimage has earned great international success as the CD/DVD publisher of choice in DICOM distribution," says Manny Almeida, Executive Vice President of Sales and Marketing, Rimage Corporation. "We want to replicate that success by creating new systems that can be used in other medical applications. Our new Medical Disc System products now have integrated servers powerful enough to publish discs and run medical applications all in one unit."

### **About Rimage**

Rimage Corporation ([www.rimage.com](http://www.rimage.com)) is the world's leading provider of recordable CD, DVD and BD publishing systems, which are used by businesses to produce discs with customized digital content on an on-demand basis. Rimage's publishing systems, which span the range from high to low CD/DVD production volumes, integrate robotics, software and surface label printers into a complete publishing solution. Rimage is focusing its CD/DVD publishing solutions on a set of vertical markets with special needs for customized, on-demand digital information: digital photography, medical imaging, financial institutions, business offices, and government.

### **About Data Distributing**

Founded in 1984, Data Distributing develops innovative, digital and DICOM solutions, along with integration and professional services, to a growing number of facilities, OEMs and channel partners worldwide. This international company, headquartered in California, creates solutions that are used by hundreds of leading medical centers.
