

DICOM Patient CD

Manual Burn and Label Solution

AN INEXPENSIVE WAY TO BURN, LABEL, VIEW AND DISTRIBUTE PATIENT CDS WITH FULL FIDELITY DICOM IMAGES, REPORTS AND VIEWER

The DD DICOM Manual Burn CD solution is an easy-to-use software program that creates DICOM compliant, IHE standard, Patient CDs, containing diagnostic quality images and medical reports for distribution.

STOP PRINTING EXPENSIVE FILM IMAGES

A DICOM enabled viewer is automatically burned to the CD and allows recipients to view images on any computer, containing Microsoft Windows 95 or higher, without loading additional software.

The manual burn solution also operates as a stand-alone workstation and has the capability of functioning as a PACS downtime image server or portable DICOM image database. An optional thermal or inkjet CD label printer and software allow you to customize the design of the label as well as automatically include important patient information on the CD label. With DD DICOM Manual CD solution, facilities may now centralize hundreds of images and patient records onto one CD for a fraction of the cost and time of producing films and reports.

STATE-OF-THE-ART FEATURES
