

Attention Pioneer Library Customers:

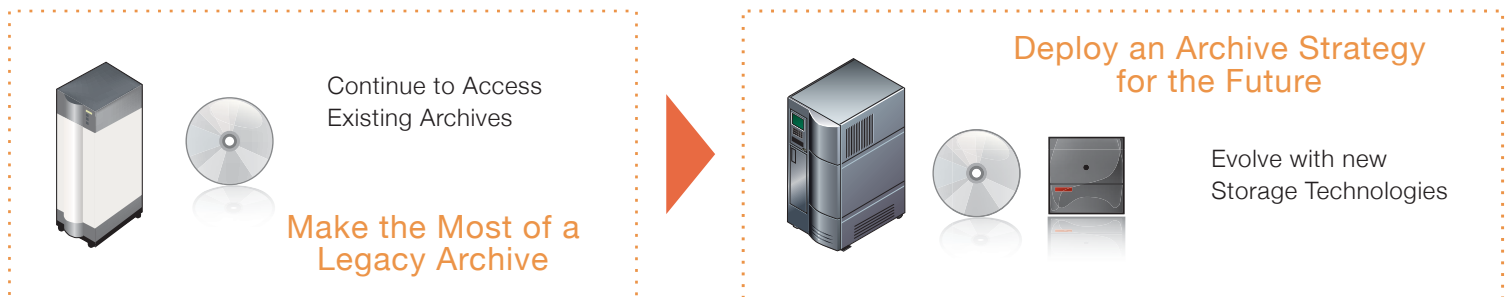

Pioneer Library Migration and a Vendor Neutral Archive for the Future!

Data Distributing and QStar Provides a Practical Solution

Support for your Pioneer CD/DVD library system has been discontinued by the manufacturer, but there's no need to panic. Now is the perfect time to evolve your archive strategy in a way that leverages the investment in your Pioneer library while planning for future archive growth. Data Distributing and QStar have teamed up to provide a special program designed specifically for Pioneer library customers.

QStar solutions provide enterprise class archive and data management, supporting the widest possible range of optical and tape libraries. Combine this with the archive expertise and services from Data Distributing and you gain the flexibility you need to redesign your archive.

- Migrate an archive from virtually any legacy system
- Deploy a vendor neutral archive solution
- Mitigate the risk of OS, file system and storage technology dependencies
- Provide comprehensive assessment, migration and support services

Deploy a New QStar Archive Solution without Legacy Data Disruption

Pioneer library customers can replace their current library management interface with QStar's HSM software or a SntrySTR NAS appliance and a new, high capacity Blu-ray library or a second mirrored spinning disk solution.

- Non-disruptive migration strategy
- HSM and SntrySTR can continue to access data archived in your Pioneer library¹
- Plan and execute a carefully controlled and fully verified data migration
- QStar offers advance disaster prevention options for future requirements
- Data Distributing provides a complete Customer Needs Assessment
- Customer support includes Installation and technical support

Smooth Transition from Previous Legacy Archive

A QStar solution accesses your current data if your archive is using a standard UDF file system format from POINT, DiskXtender, Pegasus, K-PAR, KOM or another vendor¹. At the same time, new Blu-ray library or spinning disk solutions can be configured to enable a well managed migration of your data from low capacity CD/DVD to high capacity Blu-ray media or mirrored disk solutions that can scale from 1TB to 96TB.

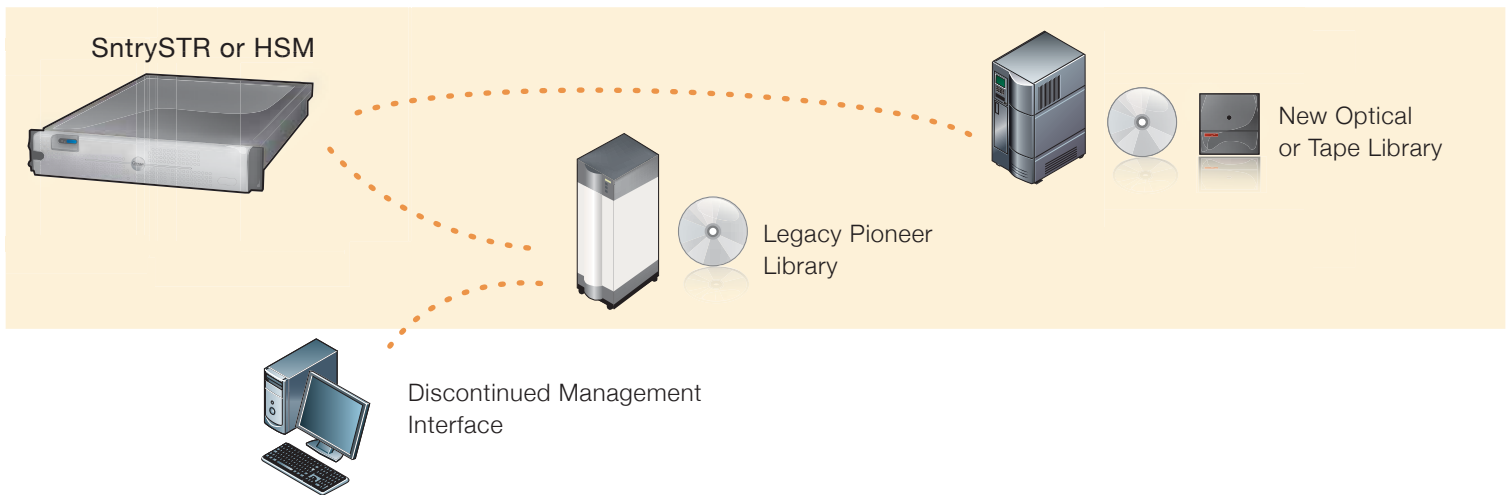

HSM and SntrySTR Advantages

- Continue to access existing archive data
- Migrate archive data to new technology when it's right for the business
- Choose the vendor and technology that best fits the customer needs
- Deploy a platform that provides capacity and functionality scalability

Technology Independent, Go-Forward Strategy!

An HSM or SntrySTR solution secures long term software support through QStar and Data Distributing and avoids the disruption and cost of an unplanned data migration. The field proven QStar platform provides a technology independent go-forward strategy that evolves with your archive needs through simple capacity expansion and advance disaster prevention functionality.

Archive Upgrade with QStar

Data Distributing

Celebrating 25 years in business, Data Distributing develops innovative digital and DICOM solutions and provides the integration and professional services to a growing number of facilities, OEMs and channel partners worldwide.
