Features :

▶ Color calibration function to reproduce colors faithful to the original and grayscale compliant with DICOM Part 14

By calibrating color temperature, luminance, and gamma characteristics, reproduction of colors faithful to the original and smooth display of grayscale are possible. (A calibration kit is required.)

▶ Built-in 10bit LUT (Look-up Table) to reproduce beautiful grayscale

The built-in LUT selects the most appropriate 256 shades of gray (8bit) out of 1021 shades (10bit) to realize finer and smoother grayscale.

▶ Luminance stabilizing system λ-Sentinel for stable display of medical images

Automatically corrects and luminance fluctuation due to startup drift, temperature change, and aging to provide stable luminance.

▶ High image quality provided by the IPS panel

The IPS panel is effective in preventing color and contrast changes caused by different viewing angles.

▶ Special AR Coating for Film-like Black and Improved Sharpness

TOTOKU's new special AR coating technology addresses properties of focus, noise reduction, contrast, and viewing angle achieving film-like black and accurate reproduction of images. (Patent pending)

▶ Worldwide medical safety standards

This display is certified under various medical safety standards that are much more demanding than those for general-purpose IT equipment.

▶ Medivisor Series software (Optional)

The Medivisor Series software offers collective support for display quality control and delivers high-quality and stable medical images while realizing reduction in display quality management costs.
