PRESS RELEASE

FOR IMMEDIATE RELEASE

Data Distributing Makes Big Splash with HIPAA Compliant, Disc Destruction Device, CD Wipeout

September 18, 2006, Laguna Hills, CA - Data Distributing, leader in image capture, distribution and archive, announces a new product in its peripheral line up, CD Wipeout.

CD Wipeout addresses the need of hospitals and imaging centers that transitioned to a digital environment for image and record creation, distribution and storage, and now require a way to properly destroy patient data CDs. Whether a staff member inadvertently burned too many copies of a patient CD, or perhaps even a partially burned, rejected CD, a disc may have some level of patient data, therefore requires proper destruction.

"CD Wipeout is a disc destruction device that destroys CDs to the extreme degree required by HIPAA. Non-compliance with HIPAA's wrongful disclosure standards, even in unintentional situations, carries a hefty fine," says Jennifer Coleman, Marketing Manager for Data Distributing. "CD Wipeout renders the best possible results for facilities to protect themselves, and we are thrilled to offer this exciting new product to our customers."

CD Wipeout utilizes a grinding technology that removes the indelible printed label, while simultaneously destroying the data layer. By grinding the CD from the top layer, downward, the patient data imprinted on the top of the disc, such as name, date of birth, social security number is removed, as well as the data layer, which resides just under the top surface. CD Wipeout is readily available and currently shipping.
